

One Kernel to rule
them all

I took some time..

The easy way:

```
vim ~/.bashrc
```

```
add export JUPYTER_PATH=/ceph/sharedfs/work/TAML2024/TADAML25/kernels/share/jupyter:$JUPYTER_PATH
```

```
source ~/.bashrc
```

The alternative way:

```
python3 -m venv ~/venv-da
```

```
source venv-da/bin/activate
```

```
pip install --upgrade pip
```

```
pip install torch torchvision matplotlib numpy pillow scikit-learn ipykernel
```

```
python -m ipykernel install --user --name=da-kernel --display-name "DA-Kernel"
```

Copy the notebook

```
cp /ceph/sharedfs/work/TAML2024/TADAML25/da_mnist_to_m.ipynb $HOME
```
